

South Dandalup River

The Dandalup catchment contains the North and South Dandalup rivers below their dams, along with Conjurunup Creek and Cornish Gully. The South Dandalup River flows into the Murray River.

Water quality is monitored on the South Dandalup River at Patterson Road (6142623), downstream of the confluence with the North Dandalup River. There is no flow-gauging station located in the catchment.

Half the catchment lies on the Darling Plateau where the soils are mostly ironstone gravel with hard acidic red or yellow soils, although to the west sandy acidic yellow mottled soils dominate. Less than 5% of the catchment is subject to seasonal inundation, reflected in a small section of sandy and clayey swamps and leached sands. About a quarter of the catchment (west of the South Western Highway) has a high or very high risk of phosphorus leaching to waterways.

To the Darling Scarp's east the catchment remains relatively undisturbed. West of the scarp the land has been cleared, mostly for agriculture such as stock grazing.

Upstream view of the South Dandalup River at Patterson Road – February 2008

Land use classification (2006)	Area	
	(km ²)	(%)
Animal keeping – non-farming (horses)	1.7	0.68
Cattle for beef (predominantly)	100	41
Cattle for dairy	3.0	1.2
Conservation and natural	129	53
Horticulture	0.06	0.03
Industry, manufacturing and transport	3.2	1.3
Lifestyle block	1.9	0.78
Mixed grazing	2.5	1.0
Offices, commercial and education	0.09	0.04
Plantation	0.20	0.08
Recreation	0.15	0.06
Residential	0.39	0.16
Total	243	100

In 2011 the South Dandalup River had the second-lowest median TN concentration of the 13 routine monitoring sites in the Peel-Harvey catchment.
