Legend

2013 update

Mayfield Drain

Mayfield Drain catchment drains west from the Darling Plateau, discharging into the southern end of the Harvey Estuary. The catchment has 237 km of natural and modified waterways of which approximately half are gazetted under the Waroona Drainage District and managed by the Water Corporation.

The catchment's soils are mostly poorly drained flats and sandy soils containing either ironstone gravel or calcareous mounds. It has the smallest area of leached sands (5.3 km², 4.5%) of all the Peel-Harvey catchments. Nearly a third of the catchment has a high to very high risk of phosphorus loss to

Mayfield Drain - July 2010

waterways (30%).

Water quality is monitored at the gauging station close to the Old Bunbury Road (613031), near the outlet of the catchment.

FFlow data were collected at Mayfield Drain between 7 March 1991 and 5 March 2002, then from 11 May 2005 to 31 October 2007 and from 1 June 2010.

During the years the gauging station was operational Mayfield Drain flowed continuously. 2001 and 2006 were extremely dry resulting in much lower flows (and loads) than other years.

Most of the catchment is used for agriculture (e.g. cattle and mixed grazing) with the largest percentage area dedicated to a single land use ('cattle for beef') of all the Peel-Harvey catchments. Mayfield Drain also had the smallest area and percentage of remnant vegetation of the Peel-Harvey catchments.

Land use electification (2004)	Area			
Land use classification (2006)	(km²)	(%)		
Animal keeping – non-farming (horses)	1.0	0.80		
Cattle for beef (predominantly)		87	73	
Cattle for dairy		3.7	3.1	
Conservation and natural		16	13	
Cropping		0.03	0.02	
Horticulture		0.44	0.37	
Industry, manufacturing and transport		2.8	2.3	
Lifestyle block		0.58	0.48	
Mixed grazing		8.3	7.0	
Residential		<0.01	<0.01	
Total	119	100		

In 2012 Mayfield Drain had the second-lowest median TN and TP concentrations of the 13 sites sampled in the Peel-Harvey catchment.
